## Dermatrophin PMG is a Special Combination Formula Containing Bovine Epithelial PMG<sup>™</sup> Extract, Magnesium Citrate, and Calcium Lactate

Dermatrophin PMG is a product formulated to help maintain the healthy functioning of the epithelial cells. The skin is the largest organ of the body. The outermost portion, the epidermis, consists of five different layers that are continually regenerating, giving rise to structures such as hair and nails and supporting sweat and sebaceous glands. The skin serves the general functions of protection, temperature regulation, excretion, synthesis, and sensory reception. It facilitates the movement of substances through ducts, the production of germ cells, and reception of stimuli. The skin's ability to regenerate is exceptional, replacing itself as often as every 24 hours.†

## How Dermatrophin PMG Keeps You Healthy

### Maintains cellular health

Protomorphogen<sup>™</sup> extract is the brand name of Standard Process' extracts derived from nucleoprotein-mineral molecules. The foundation for the function of these uniquely-formulated nucleoprotein-mineral extracts comes from the antigen-antibody reaction that takes place during normal cell maintenance. The antigenic properties promote healthy cellular division, function, and growth. When a tissue needs support, at least a dozen different compounds are formed that can cause white blood cells to travel together toward the compromised area. They include degenerative products of the tissues themselves. These substances strongly activate the macrophage system, and within a few hours, the macrophages begin to devour the destroyed tissue by-products. At times, the macrophages can also affect the structure of the remaining healthy cells. The bovine epithelial PMG<sup>™</sup> extract in Dermatrophin PMG appears to neutralize the circulating antibody, thereby contributing to the maintenance of cellular health.†

### Improves calcium absorption and supports nervous system function

Calcium lactate is a highly soluble calcium salt and naturally bioavailable—it changes to calcium bicarbonate (the type used by the body) in one chemical step. Unlike some other forms of calcium that are less soluble in water and need higher acid concentrations to be absorbed, calcium lactate exists near a more neutral pH and does not require acid conditions to work. The calcium lactate in Dermatrophin PMG is derived from pure-vegetable sources of calcium, not dairy sources. Calcium is important for the healthy functioning of the nervous system and transmission of nerve impulses.†

### Sustains metabolic efficiency

While magnesium is present in most cells in only minute quantities, it plays an important role in human metabolism, as does its partner, calcium. It functions in such reactions as nerve conduction and nerve excitability, transfer of energy, muscular activity, and many other specific processes. Magnesium functions as a cofactor, assisting enzymes in catalyzing many chemical reactions. Magnesium and calcium are synergistic, meaning that what they do for the body together, they cannot perform on their own.†

# Dermatrophin PMG®

## What Makes Dermatrophin PMG Unique

### Unique Product Attributes

#### Contains Protomorphogen™ extracts

- Standard Process' unique manufacturing method of deriving tissue cell determinants from animal glands and organs
- Help provide cellular support and rehabilitation in corresponding human tissues
- Important antigenic properties of nucleoprotein-mineral determinants, the foundation of the product†

#### The calcium lactate in Dermatrophin PMG is a pure-vegetable source of calcium

- Not derived from a dairy source

### Unique Processing

#### Exclusive low-temperature, high-vacuum drying technique

- Preserves the enzymatic vitality and nutritional potential of ingredients

#### Not disassociated into isolated components

- The nutrients in Dermatrophin PMG are processed to remain intact, complete nutritional compounds

#### Degreed microbiologists and chemists in our on-site laboratories constantly conduct bacterial and analytical tests on raw materials, product batches, and finished products

- Ensures consistent quality and safety

#### Vitamin and mineral analyses validate product content and specifications

- Assures high-quality essential nutrients are delivered

### Whole Food Philosophy

*Dr. Lee challenged common scientific beliefs by choosing a holistic approach of providing nutrients through whole foods. His goal was to provide nutrients as they are found in nature—in a whole food state where he believed their natural potency and efficacy would be realized. Dr. Lee believed that when nutrients remain intact and are not split from their natural associated synergists—known and unknown—bioactivity is markedly enhanced over synthetic nutrients. Following this philosophy, even a small amount of a whole food concentrate will offer enhanced nutritional support, compared to a synthetic or fractionated vitamin. Therefore, one should examine the source of nutrients rather than looking at the quantities of individual nutrients on product labels.*

*Each tablet supplies 60 mg bovine epithelial PMG™ extract.*

**Proprietary Blend:** Bovine epithelial PMG™ extract and magnesium citrate.

**Other Ingredients:** Calcium lactate, cellulose, and calcium stearate.

**Suggested Use:** One tablet per meal, or as directed.

**Sold to health care professionals.**

Studies on nutrients generally use large doses and these studies, some of which are cited below, are the basis for much of the information we provide you in this publication about whole food ingredients. See the supplement facts for Dermatrophin PMG®.
