Please Copy for Your Patients

Livaplex Contains the Complete Vitamin A Complex in Addition to More Than 10 Other Important Nutrients for Liver Support

To date, researchers have identified more than 500 functions performed by our body's largest organ, the liver. The liver is involved, in some way, with every major organ system in the body. It requires nutritional support to remain efficient and needs certain vitamins and minerals to carry out a good number of its daily tasks. The liver's cells manufacture bile used to begin the breakdown of fats for further digestion. The liver is responsible for secreting glucose, proteins, vitamins, fats, and many other compounds used by the body. The liver processes hemoglobin for its vital iron stores and converts toxic ammonia to urea. The liver also detoxifies other poisons we take into our bodies, such as alcohol and nicotine, and toxic substances produced in the intestine.

How Livaplex Keeps You Healthy

Promotes healthy immune system function

Vitamin A helps the body maintain healthy mucous membranes, urinary tract, and lungs. Both vitamin B₆ and iron support immune system response and help support healthy blood. Zinc also enhances immune function.†

Keeps your circulatory system healthy

Niacin helps promote healthy cholesterol levels in the blood in individuals with healthy levels. Vitamin B₆ discourages the formation of homocysteine, helping the body to keep this substance within an acceptable range.†

Maintains cellular health

Niacin functions as two important coenzymes that are key to cell respiration, carbohydrate and protein metabolism, and lipid synthesis. Vitamin B₆ plays a direct role in regulating proper cell growth and division. It also promotes red blood cell formation and helps maintain the sodium/potassium balance, important in helping prevent some sources of water retention in the body. Vitamin A helps maintain and repair epithelial cells to promote healthy skin and mucous membranes. Iron and copper join forces to produce hemoglobin to oxygenate red blood cells. Iodine helps metabolize excess fat, while zinc assists in protein synthesis and collagen formation.†

Supports digestive function

Both niacin and vitamin B₆ are needed to produce hydrochloric acid that is used to digest food properly. Niacin is involved with normal bile secretion and stomach fluids.†

Promotes normal growth and reproduction

Vitamins A, B₆, and niacin plus the minerals iron, iodine, and zinc are intimately involved with different processes of growth and reproduction.†

Introduced in:

1969

Content:

90 Capsules

Supplement Facts:

Serving Size: 1 capsule
Servings per Container: 90

		%DV
Calories	3	
Vitamin A	1,260 IU	25%
Niacin	2.8 mg	15%
Vitamin B ₆	0.8 mg	40%
Iron	2.7 mg	15%
Iodine	9.6 mcg	6%
Zinc	5.5 mg	35%
Copper	109 mcg	6%

What Makes Livaplex Unique

Unique Product Attributes

Multiple nutrients and minerals from a variety of plant and animal sources

- Extracts from bovine tissues provide nutrients and support to the corresponding tissues in humans
- Vitamins, minerals, and nutrients from plants and animal tissues work synergistically for maximum effect†

Contains Protomorphogen™ extracts

- Standard Process' unique manufacturing method of deriving tissue cell determinants from animal glands and organs
- Help provide cellular support and rehabilitation in corresponding human tissues
- Important antigenic properties of nucleoprotein-mineral determinants, the foundation of the product†

Certified Organic Farming

A healthy ecosystem is created by using organic farming techniques, such as rotating crops, fertilizing the soil with nutrient-rich cover crops and by-products from our processing, practicing strict weed control standards, and continually monitoring the health of our plants

- Assures the soil is laden with minerals and nutrients
- Ensures plants are nutritionally complete and free from synthetic pesticides

Unique Processing

Upon harvesting, nutrient-rich plants are immediately washed and promptly processed

- Preserves nutritional integrity

Exclusive low-temperature, high-vacuum drying technique

- Preserves the enzymatic vitality and nutritional potential of ingredients

Not disassociated into isolated components

- The nutrients in Livaplex are processed to remain intact, complete nutritional compounds

Degreed microbiologists and chemists in our on-site laboratories constantly conduct bacterial and analytical tests on raw materials, product batches, and finished products

- Ensures consistent quality and safety

Vitamin and mineral analyses validate product content and specifications

- Assures high-quality essential nutrients are delivered

Whole Food Philosophy

Dr. Lee challenged common scientific beliefs by choosing a holistic approach of providing nutrients through whole foods. His goal was to provide nutrients as they are found in nature—in a whole food state where he believed their natural potency and efficacy would be realized. Dr. Lee believed that when nutrients remain intact and are not split from their natural associated synergists—known and unknown—bioactivity is markedly enhanced over synthetic nutrients. Following this philosophy, even a small amount of a whole food concentrate will offer enhanced nutritional support, compared to a synthetic or fractionated vitamin. Therefore, one should examine the source of nutrients rather than looking at the quantities of individual nutrients on product labels.

Proprietary Blend: Bovine liver PMG™ extract, Spanish black radish (root), bovine liver, calcium lactate, beet (root), carrot (root), *Tillandsia usneoides*, dried beet (leaf) juice, betaine hydrochloride, magnesium citrate, choline bitartrate, soy (bean), oat flour, bovine kidney, bovine prostate, bovine adrenal Cytosol™ extract, defatted wheat (germ), bovine liver fat extract, bovine orchic extract, ascorbic acid, flaxseed oil extract, and mixed tocopherols (soy).

Other Ingredients: Gelatin, zinc liver chelate, iron liver chelate, water, potassium bicarbonate, calcium stearate, niacinamide, copper liver chelate, colors, pyridoxine hydrochloride, vitamin A palmitate, and prolamine iodine (zein).

Suggested Use: One capsule per meal, or as directed.

Warning: Accidental overdose of iron-containing products is a leading cause of fatal poisoning in children under 6. Keep this product out of the reach of children. In case of accidental overdose, call a doctor or poison control center immediately.

Sold to health care professionals.

Studies on nutrients generally use large doses and these studies, some of which are cited below, are the basis for much of the information we provide you in this publication about whole food ingredients. See the supplement facts for Livaplex®.
