Please Copy for Your Patients

Ostrophin PMG is a Special Combination Formula Containing Veal Bone PMG[™] Extract, Calcium Lactate, Carrot Powder, Bovine Bone, and Manganese Lactate

The use of carrots and their juice to improve health is an ancient practice. Carrots are a true health food with calcium, manganese, iron, magnesium, phosphorus, potassium, sodium, zinc, copper, selenium, vitamin A complex precursors, vitamin C complex, thiamine, riboflavin, niacin, pantothenic acid, vitamin B₆ complex, and folate. Amino acids are also found in carrots. Over the years, the many nutrients found in carrots have shown protective properties that benefit a number of the body's major organs. Bone serves a myriad of functions beyond providing shape and support for the body. Bone serves as storage sites for mineral salts, and bone marrow provides a factory for the formation of blood cells. Manganese is necessary for bone growth, development, and replacement.†

How Ostrophin PMG Keeps You Healthy

Maintains cellular health

Protomorphogen[™] extract is the brand name of Standard Process' extracts derived from nucleoprotein-mineral molecules. The foundation for the function of these uniquely-formulated nucleoprotein-mineral extracts comes from the antigen-antibody reaction that takes place during normal cell maintenance. The antigenic properties promote healthy cellular division, function, and growth. When a tissue needs support, at least a dozen different compounds are formed that can cause white blood cells to travel together toward the compromised area. They include degenerative products of the tissues themselves. These substances strongly activate the macrophage system, and within a few hours, the macrophages begin to devour the destroyed tissue by-products. At times, the macrophages can also affect the structure of the remaining healthy cells. The veal bone PMG[™] extract in Ostrophin PMG appears to neutralize the circulating antibody, thereby contributing to the maintenance of cellular health.†

Helps build and maintain strong bones and teeth

Calcium is the most important element required for the body to build and maintain strong bones and teeth and to trigger a myriad of other important physiological processes. Some forms of calcium found in the food chain are not absorbed by the body as effectively as others, and its precious benefit is lost. Calcium lactate is a highly-bioavailable and useful form of this important element since it converts to calcium bicarbonate in one chemical step.†

Supports healthy skeletal and connective tissue development

Manganese is necessary for proper bone growth and development. Manganese acts as a catalyst and a cofactor in many complicated and important enzymatic processes—as in the synthesis of mucopolysaccharide to name just one. Mucopolysaccharide is an important building block in the bone and cartilage structural matrix, as well as for the ongoing health and maintenance of ligaments and tendons.†

Ostrophin PMG®

What Makes Ostrophin PMG Unique

Unique Product Attributes

Contains Protomorphogen™ extracts

- Standard Process' unique manufacturing method of deriving tissue cell determinants from animal glands and organs
- Help provide cellular support and rehabilitation in corresponding human tissues
- Important antigenic properties of nucleoprotein-mineral determinants, the foundation of the product†

The calcium lactate in Ostrophin PMG is a pure-vegetable source of calcium

- Not derived from a dairy source

Certified Organic Farming

A healthy ecosystem is created by using organic farming techniques, such as rotating crops, fertilizing the soil with nutrient-rich cover crops and by-products from our processing, practicing strict weed control standards, and continually monitoring the health of our plants

- Assures the soil is laden with minerals and nutrients
- Ensures plants are nutritionally complete and free from synthetic pesticides

Unique Processing

Upon harvesting, nutrient-rich plants are immediately washed and promptly processed

- Preserves nutritional integrity

Exclusive low-temperature, high-vacuum drying technique

- Preserves the enzymatic vitality and nutritional potential of ingredients

Not disassociated into isolated components

- The nutrients in Ostrophin PMG are processed to remain intact, complete nutritional compounds

Degreed microbiologists and chemists in our on-site laboratories constantly conduct bacterial and analytical tests on raw materials, product batches, and finished products

- Ensures consistent quality and safety

Vitamin and mineral analyses validate product content and specifications

- Assures high-quality essential nutrients are delivered

Whole Food Philosophy

Dr. Lee challenged common scientific beliefs by choosing a holistic approach of providing nutrients through whole foods. His goal was to provide nutrients as they are found in nature—in a whole food state where he believed their natural potency and efficacy would be realized. Dr. Lee believed that when nutrients remain intact and are not split from their natural associated synergists—known and unknown—bioactivity is markedly enhanced over synthetic nutrients. Following this philosophy, even a small amount of a whole food concentrate will offer enhanced nutritional support, compared to a synthetic or fractionated vitamin. Therefore, one should examine the source of nutrients rather than looking at the quantities of individual nutrients on product labels.

Each tablet supplies 195 mg veal bone PMG™ extract and 40 mg bone meal.

***Proprietary Blend:** Veal bone PMG™ extract, carrot (root), and bovine bone.*

***Other Ingredients:** Calcium lactate, honey, manganese lactate, and calcium stearate.*

***Suggested Use:** One tablet per meal, or as directed.*

Sold to health care professionals.

Studies on nutrients generally use large doses and these studies, some of which are cited below, are the basis for much of the information we provide you in this publication about whole food ingredients. See the supplement facts for Ostrophin PMG®.
